

Great Clips Franchisee Selects ControlByNet's Cloud Surveillance to Provide Hosted Video Solution for Multiple Locations

ControlByNet, (CBN), a software development leader in cloud-based video surveillance solutions, announced today a multi-site Great Clips franchisee out of Austin, Texas selected ControlByNet's i-flashback REMOTE to record video in the cloud for its locations.

Atlanta, GA ([PRWEB](#)) February 05, 2014 -- [ControlByNet](#), (CBN), a software development leader in cloud-based video surveillance solutions, announced today a multi-site Great Clips franchisee out of Austin, Texas selected ControlByNet's [i-flashback REMOTE](#) to record video in the cloud for its locations.

With multiple locations in Texas, owner John Moore required a solution that allowed plug-and-play cameras, low bandwidth usage and most importantly single sign-on owner access for all locations yet limited manager access for single sites. "Ease of use and accessibility are key for us since we use it for store management as much as security," says Moore. "The ability to have all our video safely stored online with the complete mobile access features from ControlByNet was a big plus. Since ControlByNet is the owner and original developer of the software it gave us even more confidence in the solution."

ControlByNet has the most flexible hosted solution on the market, allowing resellers to instantly enter the hosted video space without any upfront costs. End-user customers can work directly with ControlByNet on a solution that is designed specifically for their needs. The i-flashback solution is a fully managed hosted video platform that has the ability to 'attach' to managed servers at the customer's property if needed. It's the total solution for joining branch sites with hosted video to a company headquarters with an onsite system.

"While our intention is to utilize resellers to bring hosted/cloud video to the market, we will work directly with end-users until video integrators look to hosted video as a viable alternative to DVR's," says Ryan Strange, CEO of ControlByNet. "Our main customer base for hosted and managed video has been the southeast, but as word is spreading, we're being contacted from areas around the country, we expect 2014 to be a big year for us and hosted video."

[About ControlByNet](#)

ControlByNet provides the most advanced adaptable hosted and managed IP-based surveillance solution on the market. ControlByNet's innovative software is the cornerstone for the new security surveillance business model. By leveraging Software as a Service (SaaS), CBN's solution integrates seamlessly across its products creating limitless installation scenarios. The hierarchal nature of the software allows a single log-in with multiple levels of access from any (Internet) location which leverages existing enterprise resources. While the i-flashback interface is as simple to use as a nanny cam, both versions of the software are sophisticated enough to manage thousands of remote cameras from a single browser including Internet Explorer, Firefox and Chrome as well as mobile devices such as the Droid, iPhone or iPad.
