ControlByNet LLC Provides Cloud Support for Axis Speakers

March 1, 2017 – Atlanta – ControlByNet LLC has announced support for Axis network speakers in its' cloud-based video surveillance solution. Both the network speaker and horn speaker will be supported in full via the i-flashback interface and also provide a direct-connect option through the interface which allows the avoidance of port forwarding for the speakers or any outside access. Configuration will be done directly in the i-flashback interface.

"Our cloud software really allows us to implement almost an IP device within a few hours, and this is an upcoming product that will be necessary in many surveillance environments" states Ryan Strange, President of ControlByNet LLC. "In addition it helps set us apart from the 'box sellers' of the world that focus on the hardware aspect and leave the software lacking in functionality and user interface cleanliness".

ControlByNet LLC already supports almost any IP camera as well as analog cameras via video encoders. Adding speakers further enhances the application of the solution, and keeping it all in the cloud eases the restraints on the end user. Established as one of the first cloud surveillance companies, this allows a depth of user knowledge and experience to help customers.

ControlByNet LLC will shortly be releasing a new version with a completely updated user interface to meet the demands of current cloud applications. Making the software easy to use and similar to other cloud applications a user already utilizes is a big component of the newest release, along with many feature additions.

About ControlByNet (www.ControlByNet.com)
ControlByNet provides the most flexible Cloud and managed IP-based surveillance solution on the market. ControlByNet works with integrators and resellers to create recurring revenue for them and provide the innovative Cloud Plus™ security surveillance software to their customers. By leveraging Software as a Service (SaaS), CBN's solution integrates seamlessly across its products creating limitless installation scenarios. The hierarchal nature of the software allows a single log-in across multiple accounts hosted on multiple servers – anywhere on the Internet. While the i-flashback interface is as simple to use as a nanny cam, both versions of the software are sophisticated enough to manage thousands of remote cameras from a single browser interface. Cloud Plus™ is fully html 5.0 browser compliant, meaning the web interface operates on all current browsers including all mobile devices (iPad, iPhone, Android, Chrome, Firefox and Safari).
